As a resident of the 2013 version, you'll enjoy the following features: - An impressive number of new features, including Access Anywhere, SmartScreen, a larger number of user-friendly security features, and improved automatic virus scan options - A new state-of-the-art antivirus program that includes automatic malware scanning for both files and e-mail messages as well as an improved heuristic engine - The option to automatically shred your sensitive information after deleting it - An improved Windows Firewall with additional, user-friendly options - A redesigned Family Center

What's New In Advanced Identity Protector?

Advanced Identity Protector is a powerful tool that has been designed to keep your personal information secure and well-organized. Using it you can scan different environments for information leftovers, as well as exclude specific traces. The latter means that they won't show up in the results of the scans. Advanced Identity Protector is a tool that dig up personal information from several environments, including browsers, system files and mail clients. If you want to delete or exclude certain items, you can process them using the Delete, Exclude or Move to Secure Vault commands. You can also store them in your Secure Vault in case you need them later on. Advanced Identity Protector features a secure vault that keeps all traces in an encrypted format and is accessed with a password. The vault can be managed automatically, in relation with the command that deletes, excludes or moves the contents to the vault. The vault can also be accessed only by the person who requires it. Furthermore, Advanced Identity Protector is a useful tracker that provides a list of all information leftovers discovered by the tool. You can then find out whether to delete, exclude or store the information. System Requirements: Microsoft Windows 98/ME/2000/XP/2003/Vista, Microsoft Word 2003, Microsoft Outlook 2003, Internet Explorer 7, Internet Explorer 8, Internet Explorer 9, Microsoft Outlook 2007, Microsoft Outlook 2010, Microsoft Outlook 2013, Google Chrome, Google Chrome Canary In order to use this tool you'll need • Free registration • .NET framework 3.5 or higher • 1GB free hard disk space • 2GB RAM, minimum • 2GB RAM, recommended • A browser and mail client that support advanced security options • Version 5 or higher of the tool. Installation If you want to install the tool then you'll need to download it to your desktop and run the Setup program. The installation is simple and takes only few minutes. After the installation is finished, you can open the tool and follow the instructions to run your first scan. Advanced Identity Protector does not include any kind of ads and is a completely free download. You don't need to pay anything to use the tool or download it. When you've installed the tool you'll get an icon on your desktop. You can click on it to start scanning. After you've completed your first scan, you'll be able to choose which type of results you want to export. You can choose to either exclude or delete the info traces. If you select to exclude them, then they won't be included in the future scans. When you've made your choice, you can click on the Export button to save the results in any desired folder. You can choose from
